GOOD MOVES #7

...and as many parking spaces protected from the sun

Renault Trucks is equipping its industrial site in Bourg-en-Bresse with 17 hectares of solar panels. The electricity produced by these installations corresponds to the consumption of a town of 17,500 inhabitants.

What is a Good Move?

A Good Move is something that helps – or inspires us – at Renault Trucks to reach our ambitious goals of reducing CO₂ emissions.

Why is this a Good Move?

Part of the electricity produced by these photovoltaic panels will cover 30% of the Bourg-en-Bresse plant's consumption.

The installation will also protect employees' vehicles and the trucks produced at the plant.
