Reshaping urban logistics

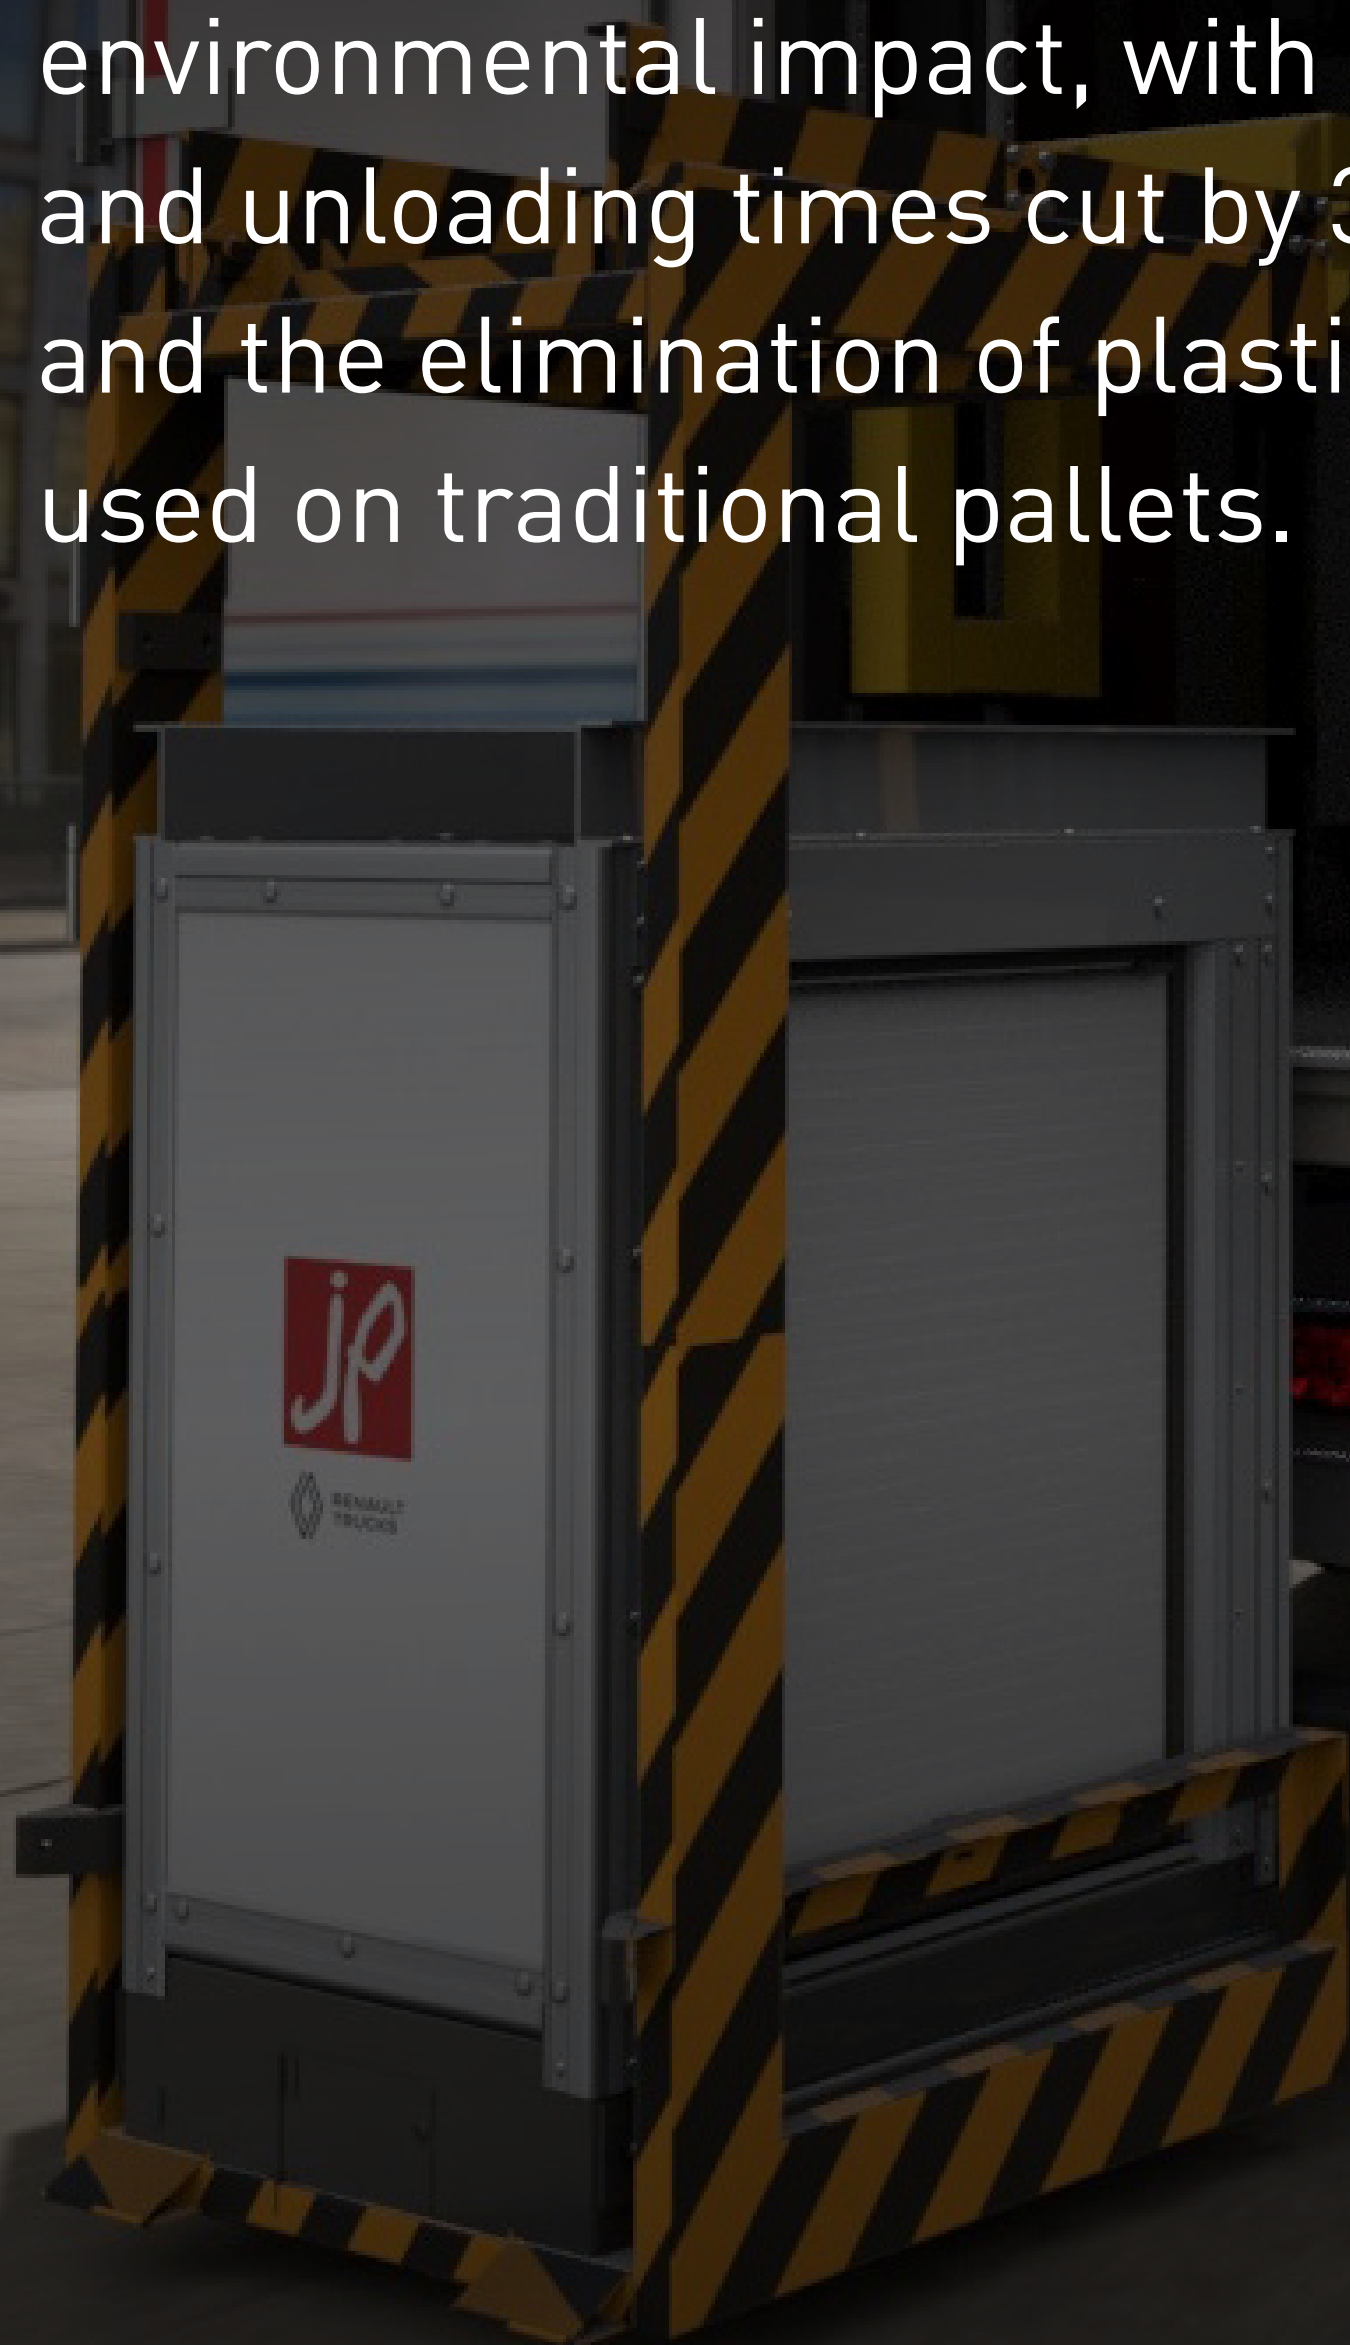

Renault Trucks and the Jacky Perrenot Group are launching an intelligent urban logistics solution, combining the use of an electric truck equipped with mobile containers with an innovative automated loading/unloading system developed by ACTEMIUM.

What is a Good Move?

A Good Move is something that helps – or inspires us – at Renault Trucks to reach our ambitious goals of reducing CO₂ emissions.

Why is this a Good Move?

This system promises significant gains in terms of productivity, safety and ergonomics, as well as reduced environmental impact, with loading and unloading times cut by 30% and the elimination of plastic film used on traditional pallets.
