

Press Release

OCTOBER 2025

Renault Trucks at Solutrans 2025: Driving the decarbonisation of transport

At Lyon Eurexpo from 18 to 22 November 2025, Renault Trucks will be taking part in the 18th edition of Solutrans, the leading trade fair for road and urban transport. On a 900 m² stand (Hall 4 – D104), the manufacturer is set to showcase a comprehensive and practical vision of transport decarbonisation through its vehicles, services and partner ecosystem.

■ A pragmatic vision of decarbonised transport

Renault Trucks supports its customers through every stage of their energy transition, offering solutions tailored to every type of use, including urban distribution & logistics, construction, environmental services, and regional and long-haul transport.

At Solutrans, Renault Trucks will demonstrate that while electric mobility is the cornerstone of a global decarbonisation strategy, this can be complemented by optimised diesel solutions and an integrated eco-circular approach, including truck reconditioning, retrofitting and regenerated parts.

■ A stand dedicated to innovation and 360° support

Featuring an immersive design, the Renault Trucks stand will give visitors the opportunity to discover:

- The full electric Renault Trucks E-Tech range, from the e-cargo bike and Renault Trucks E-Tech Master LCV to E-Tech D distribution trucks and E-Tech T tractors.
- Optimised internal combustion engines, including the Renault Trucks T Smart Racer and B100 solutions, which reduce fuel consumption and CO₂ emissions.
- 360° support services: financing (RTFS), rental, fleet management and service contracts (Clovis), charging infrastructure (Mobilize, Izivia, Bump, Chargepoly, Milence), as well as reconditioning and circular economy initiatives.

Exclusively at Solutrans, Renault Trucks will also be unveiling three new vehicles, illustrating its ongoing capacity for innovation and its commitment to ever more sustainable mobility.

These three models mark major milestones:

- A new step forward in electric long-distance transport
- A development in the urban distribution range
- A new LCV version, designed to meet the specific demands of operational professions.

■ **An engaged ecosystem**

As transport decarbonisation is a collective effort, Renault Trucks has chosen to work alongside leading partners: Clovis (rental, service contracts, fleet management), Renault Trucks Financial Services (financing and insurance solutions), Kleuster (cargo bikes), Milence (public charging infrastructure), and Mobilize, Izivia, Bump and Chargepoly (private charging). Together, they form a complete ecosystem dedicated to fleet performance and sustainability.

■ **Opportunities to understand, exchange ideas and plan for the future**

Renault Trucks press conference

Wednesday 19 November at 10 a.m. – Hall 4, Stand D104

With Christophe Martin, Managing Director, Renault Trucks France

Throughout the fair, Renault Trucks experts will be leading and taking part in a number of conferences on key industry issues:

- **Energy transition: new energies, new uses, new solutions**, Wednesday 19 November – 2 p.m.
With Olivier Metzger, Director of Alternative Energies, Renault Trucks France
- **Sustainability: retrofitting, regenerating, recycling**, Thursday 20 November – 2 p.m.
With Pierre Masclet, Director of Reconditioned and Used Vehicles, Renault Trucks France
- **Urban logistics: technological innovation and new strategies**, Thursday 20 November – 3 p.m.
With Christophe Martin, Managing Director, Renault Trucks France

À propos de Renault Trucks

Renault Trucks, constructeur français de camions, fournit aux professionnels de la route depuis 1894, des solutions de mobilité durable, de l'utilitaire léger au tracteur routier. Engagé dans la transition énergétique, Renault Trucks propose des véhicules à la consommation de carburant maîtrisée et une gamme complète de camions 100 % électriques, dont la durée d'exploitation est prolongée grâce à une approche circulaire.

Renault Trucks fait partie du groupe Volvo, l'un des principaux constructeurs mondiaux de camions, d'autocars et autobus, d'engins de chantier et de moteurs industriels et marins. Le groupe fournit également des solutions complètes de financement et de service.

Chiffres clés :

9 400 collaborateurs dans le monde

4 sites de production en France

1 500 points de vente et de service

57 000 véhicules vendus en 2024
